### **open up**

The harsh Australian environment and sometimes poor building design can result in our homes heating up very quickly during summer days. Heat can get trapped in the roof space, resulting in joint distortion, sagging ceilings and paint problems. The Skydome Powervent can offer effective ventilation of a roof cavity to combat these problems as well as improve the efficiency of air conditioners.

Releasing hot air trapped in your roof means your airconditioner won't have to work as hard. This serves to reduce energy consumption, greenhouse gas emissions and energy costs. The Powervent does not need a breeze to function but operates thermostatically or on a timer switch. It can expel 15,000 litres of air per minute, equivalent to eight wind vents operating at maximum capacity, and costs less than one cent an hour to run. From \$540, Direct Skylight Supplies 8262 9512 or 8299 0399.
